

Freshers' flu or Carbon Monoxide (CO) poisoning?

The most common symptoms of carbon monoxide poisoning are dizziness, headaches, lethargy, nausea, vomiting and loss of concentration. Breathing in high levels of carbon monoxide can cause loss of consciousness and death in a matter of minutes.

CO poisoning can be misdiagnosed unless the cause is very obvious, so check your appliances, whatever fuel is used, to ensure they are burning properly.

Become CO aware today – it may save your life tonight!

CO-Awareness supports victims, their families and friends poisoned by Carbon Monoxide (CO) while trying to raise awareness among health professionals and the general public, of the dangers of CO.
